## NEW SERIES

## JARS FUNCTION

New and standard on all Henkelman machines with Advanced Control Panel, the jars function! This ecological packaging solution protects your product, extends the shelf life and is very easy to operate!

### JARS

The Jars function is used to vacuum seal jars or food containers in seconds with only a single push of a button. Place the jars or food containers with loose lid in the vacuum chamber, select the Jars function and close the lid of the machine. With this function, each jar is vacuumed and sealed airtight at a maximum final vacuum of 99.8%. Because the steps of heating the seal bars and the Soft Air function are disabled, the cycle is extra short.

- No plastic bags
- Fast and reliable
- Easy to re-use
- Protects delicate products

## VACUUM PACKAGING CYCLE

A vacuum packaging machine enables you to extend the shelf life of food products, and to protect and preserve the quality of food and non-food products. The vacuum packaging cycle has 4 steps.

**1 EXTRACTION OF AIR**  
The air is extracted from the product, the bag and the chamber up until the pre-set time or vacuum percentage has been reached or the boiling point has been detected.

**2 GAS FLUSH (OPTION)**  
Also called Modified Atmospheric Packaging or MAP. Adding a gas offers extra protection and prevents the product from coloring. It's usually a gas mixture.

**3 SEAL**  
The right seal system protects products effectively against external elements. Depending on the type and thickness of the vacuum pouch, and your packaging needs.

**4 AERATION**  
Once the bag has been sealed, the air is brought back into the chamber. As soon as the pressure in the chamber equals the pressure outside, the lid opens.
